

Logistics

fertilia

Egyedi műtrágyák hazai gyártótól

Dear Partner!

Fertilia Ltd. has developed a high-level transporter- and loader park in favour of delivering the products, distributed by us, right to that place and at that time that is requested by our partners.

At the same time our company operates the transportation as an independent service, which guarantees fast and reliable processes at international level.

Simon Péter

Managing director

The transportation is carried out with the most modern motor vehicles, available these days, the diversity of which makes it possible to transport the ADR fluid, bulk, pallet products as well as the ones in bag or big-bag.

The services recommended by us in the field of transportation and logistics:

- transportation of bulk products inland and abroad
- transportation of packed products (in big-bag, in sack or in pallet) inland and abroad
- transportation of liquid chemicals inland and abroad
- transportation of bulk and fluid food industry products inland and abroad
- transportation of temperature-controlled liquids, even in ADR level
- prearranged delivery deadlines
- transportation of dangerous products according to ADR: for solid, bulk, packed and fluid products as well
- provision of waterproof canvas trailers for transporting products in pallet, in big-bag, in bag and in any other kind of form

In Hungary and over the European Union international transportation takes place.

ADR tank semi-trailer, transporting chemicals

- type: G-Hungarian S 34 EB, ADR
- tank code: L 4 BH
- payload: 24-26 t
- design pressure: 4 bar, service pressure: 2 bar
- capacity: 33 m³, 3 chambers (7,5- 18- 7,5)
- tank cope: provided with lagging, can be heated, equipped with control-thermometer
- can be filled and emptied from beneath and above
- tank is equipped with gas pendulum

ADR tank semi-trailer, transporting chemicals

- type: FELDBINDER, ADR
- tank code: L 4 BH
- payload: 24-26 t
- design pressure: 4 bar, service pressure: 2 bar
- capacity: 33 m³, 3 chambers (7,5- 18- 7,5)
- tank cope: provided with lagging, can be heated, equipped with control-thermometer
- can be filled and emptied from beneath and above
- tank is equipped with gas pendulum

GPS system

By the permanent development of transportation it is essential that we know the exact location of the vehicles. Therefore the trucks of the Fertilia Kft. are equipped with satellite vehicle tracking system, which helps in the everyday work, while the further evaluations help in the organization of the better, more efficient and more cost-saving labour processes. The stored data can be checked at any time, which provides answer for the later occurring questions.

The WAYQUEST vehicle tracking system (GPS) and the related map database:

- the software provides access to the measurement data, and makes possible the evaluation of those data, recorded by the system, which relates to the movement of the vehicles

The dispatcher controls the compliance of transportation and search for the best and shortest way, to avoid the damage by the delivery. The result of this process is the time and cost savings.

The processing of trip records takes place and becomes recorded on computers, with the Microsoft Navision system, used by our company.

Tachograph

The evaluation of tachograph discs also happens on computers, with the help of the analysis system of ROADMOVER tachograph, which assures that the AETR rules could be entirely met.

Our vehicles have all necessary documents /corporate permission, CEMT permission, affirmation certificate, International intermittent testing certificate, Public transit license/. All our vehicles are equipped with the requirements, needed for the transportation of dangerous goods.

Insurances

Our company, for its own and its clients' financial interest, provides not only the compulsory liability car insurance, but also CASCO – inland cargo- and CMR international product and park insurance for all our vehicles.

Maintenance, service

Our company performs the maintenance and repair of vehicles in a well-equipped repair shop, so that they could complete their delivery tasks in first class technical condition.
