"Rizotec NPK fertilizers are defined based on the soil analyses results as well as on the needs of the subsequent plant within the Rizotec Consulting Program. Our areas of cultivation are more or less integrate therefore, thank to the fertilizer-formulation customised to the individual plants, fairly good and stable yield averages can be reached."

At the VI. Corn product Competition, Október 6. Gazda Kft. (Erő Boér manager) reached 1. place in the irrigated fields' category with its 14.37 tons/ha result in 2014! On the winning plot, the Rizotec NPK corn-specific, corn mezo- and micro elements defined fertilizer composition was applied!

Plant-specific and unique-  
composition Rizotec NPK fertilizers  
family with wide-range of macro-,  
mezo and micro elements content  
and uniquely developed  
Rizodyne soil activator!

**For effective and  
environment-protecting  
plant nutrition!**

**fertiliala**

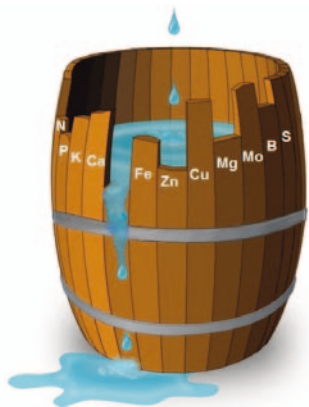

Tailor-made fertiliser from Hungarian manufacturer

## Unique composition Rizotec NPK:

The unique **Rizotec NPK** fertilizers are special compositions defined by our Rizotec Consulting Program based on the soil analyses data of fertilizers.

Considering the nutrient demand of the given plant as well as the nutrient providing capacity of the given soil, these fertilizers contain macro-mezzo and micro elements as well as Fertilia's unique development: Rizodyne soil activator in an optimal portion!

**With the unique Rizotec NPK possible to be customized to your individual needs you can make sure to select the most effective and purposeful solution for fertilizing in the most cost-effective method!**

## Plant-specific Gramix NPK:

**The plant-specific Rizotec NPK is a fertilizer family providing a harmonic and balanced supply of nutrition elements according to the specific nutrient demand of a given plantation.**

**Its advantages:**

- **Wide-range of micro elements content besides macro- and mezzo elements**
- **Micro elements in organic chelate-binding**
- **Rizodyne soil activator content**
- **Definitely customized to Hungarian soil conditions**

## Rizodyne soil activator

Rizodyne soil activator helps increase micro-organisms in the soil through the organic materials, organic chelate-generating agents and organic sulphur content.

Its effect:

- Increased soil activity
- Easier, faster and more intensive absorption of nutrients
- Fast initial growing, integrate plantation.

**With its organic material components improving soil activation, Rizodyne highly improves the efficiency of our Rizotec NPK fertilizers.**
